

I am anti-drilling **because I am a landowner, and as a landowner:**

- 1) I am opposed to the legalized trespass and theft allowed by NY's compulsory integration law (trespass because the horizontal part of the well can go right under my land whether I like it or not & theft because I will be robbed of the ability to choose whether or not to sell my gas and how much to sell it for);
 - 2) I am opposed to eminent domain being used to run pipelines across my land—a practice that is not of general societal benefit but which instead gives a great deal of power and money to private companies;
 - 3) I bought (and paid taxes on) my land with the reasonable expectation that it would be a reasonably safe, private, and peaceful place where I could pursue my own interests within the boundaries allowed by law; I did not purchase and pay taxes on the land so that it could become a part of a dangerous, active, industrial gas field swarming with workers and equipment all day and all night for years to come;
 - 4) I want to be able to pass my land on to my heirs and when I do that, I want the land to be in a condition that is as good as or better than it was when I purchased it. Plowing pollutants into the ground and planting some grass seed is not "reclamation." Once the land has been transformed and polluted by gas drilling, restoring it to its former level of safety and beauty would be, at best, fantastically expensive and is likely to be impossible no matter how much money is spent.
- Some of the "landowners" who can't wait to drill would be the very first ones to loudly proclaim the above points were it not for the fact that the gas industry has convinced them that they will all be wildly wealthy because of the drilling.
